

Hydrolyze 90 Second Wrinkle Reducer Review (UPDATED 2018)

HYDROLYZE 90

Hydrolyze 90 Tetrasodium EDTA, Tetrasodium Etidronate: Each of these are basically the identical. Another laboratory created artificial compound that is used as a chelating agent and preservative. It holds and binds metals to it so it helps in removing soap scum. There are some claims that it very simply penetrates the skin and carries these metals into your body or when coming into the body it soaks up the metals your body needs to finish the bodies processes.

Maltol This is often a naturally occurring organic compound that's used primarily as a flavor enhancer. It's found in the bark of larch tree, in pine needles, and in roasted malt where it gets its name. It seems they use this as an odor masking ingredient. The MSDS has this to say "Chronic Effects on Humans: Might cause injury to the subsequent organs: blood, kidneys, bladder, gastrointestinal tract. A
