**CALCIUM BORATE FRIT** 1030-1180°C SiO<sub>2</sub> 17.9%, B<sub>2</sub>O<sub>3</sub> 50.3%, MgO 0.1%, Al<sub>2</sub>O<sub>3</sub> 4.9%, K<sub>2</sub>O 0.3%, CaO 26.5% for use where recipes specify greater than 5% colemanite. Can be used as a base in lead free glazes.

**FERRO FRIT 3110** 950-1050°C 10.1 Expansion SiO<sub>2</sub> 69.8% Al<sub>2</sub>O<sub>3</sub> 3.7% B<sub>2</sub>O<sub>3</sub> 2.6% K<sub>2</sub>O 2.3% Na<sub>2</sub>O 15.3% CaO 6.3% Soft low alumina sodium borosilicate frit for glazes. Often used in crystal and crackle glazes. Helps in copper blues and manganese purples and raku glazes.

**FERRO FRIT 3124** 1000-1150°C 7.9 Expansion SiO<sub>2</sub> 55.3% Al<sub>2</sub>O<sub>3</sub> 9.9% B<sub>2</sub>O<sub>3</sub> 13.7% K<sub>2</sub>O 0.7% Na<sub>2</sub>O 6.3% CaO 14.1%

**FERRO FRIT 3134** 1000-1150°C 9.6 Expansion SiO<sub>2</sub> 46.5% B<sub>2</sub>O<sub>3</sub> 23.1% Na<sub>2</sub>O 10.3% CaO 20.1%

**HIGH ALKALINE FRIT** 860-1060°C SiO<sub>2</sub> 52.5%, B<sub>2</sub>O<sub>3</sub> 3.4%, Al<sub>2</sub>O<sub>3</sub> 5.2%, Na<sub>2</sub>O 18.6%, K<sub>2</sub>O 10.3%, CaO 2.9% A high alkaline (Soda and Potash) version of a borax frit. High expansion rate making them suitable for crackle glazes. Helps create turquoise copper blues and purple/brown manganese in glazes.

**LEAD BI-SILICATE FRIT** 900 - 1100°C 6.6 Expansion. SiO<sub>2</sub> 29%, Al<sub>2</sub>O<sub>3</sub> 12%, PbO 59%. Good clear, general purpose lead frit for developing rich, bright surfaces and good reaction to colours. The safe way to introduce lead. Particularly suitable for red clays.

**LEAD SESQUISILICATE FRIT** 860 - 1080°C 8.1 Expansion. As above but specially coated to reduce solubility.

**STANDARD BORAX FRIT** 900 - 1140°C. 7.8 Expansion K<sub>2</sub>O 1.33%, Na<sub>2</sub>O 8.75%, CaO 15.2%, Al<sub>2</sub>O<sub>3</sub> 7.5%, SiO<sub>2</sub> 48.3%, B<sub>2</sub>O<sub>3</sub> 18.7% Often used in the production of earthenware glazes when a lead-free glaze is required. A slight milkiness, especially at low temperatures, may be evident over red clays, and the colour response with oxides etc is not as vivid as with lead frits.

**SCMC Cellulose Glaze Binder**: use as a 2% solution a) approx 6% of the total dipping glaze weight, b) approx 20% of the total of brush on glazes. Do not use with Calcium Chloride.

**Calcium Chloride**: Used as a flocculent particularly in E/ware glazes—dissolve in hot water and then add to slop one drop at a time.

**Sodium Silicate**: used in preparation of casting slips as deflocculant. 75TW is usually for Bone China and Porcelain. One drop at a time.

**Sodium Dispex**: alternative to Sodium silicate  
**Bentone EW**: approximately 0.33% in a glaze will usually keep it in suspension.

**SCMC**: Use a 2% solution: up to 6% of a total weight of dipping glaze; up to 20% of the total weight of brush on glazes.

**FS200**: Between 1% & 2% in UG's and in larger quantities in glazes to make them more brushable.

**GUMA**: Used in water as a medium for UG's or stains and in glazes as a binder.

**SS**: Dilute in 3 parts water and apply with a brush—used to ease mould separation.

VC16	Standard White Earthenware	£17.39	£49.29	£77.50
VC26	P2 Porcelain	£24.23	£66.39	£107.20
VC27	B17C White Stoneware	£18.15	£51.45	£80.80

*Due to the fragile nature of the casting slip these prices include the cost of extra packaging. If collected or sent on a pallet it would be £3 cheaper per gallon.*

**V60** The White/Buff Stoneware is based on the E/S 10 with fillers to help shorten casting times

**V61** The porcelain is based on the Special Porcelain making a superb casting slip or base for decorating slips.

**V63** White Earthenware is ideal for small to medium items and for making decorating slips, just add stains through 100s mesh sieve.

**V59** The Red Terracotta has medium sized grogg added to the milled Etruria Marl and is suitable for large items like garden pots or urns.

## Includes cost of a "named day" delivery to most of the UK by tail-lift

See page 12 for regional price variations. For mixed pallets from Valentine/Earthstone deduct a discount of £15 off each clay price, This is a very cost effective way for purchasing clay but you must be aware that the driver will not usually carry the clay or help to move the pallet more than a few feet and then only if on a totally flat surface.

A = Texture 1=smooth, 10=coarser

B = % Contraction at 1100oC for Earthenware & at 1200oC for Stoneware

C = Y means the clay is a stock item for call in customers / small lots mail order customers (see P6-7)

### Geographic Additional Charges, Multiple Clay Discounts and Delivery Information

Direct Delivery includes the cost of delivery to the main areas of the UK but needs VAT to be added

**MIXED PALLETS** : if you take a mixed pallet from **ONE** Clay producer (minimum 250kg per clay) i.e. 2 x 250kg or 500kg + 250kg etc please deduct **£15** from the price of each clay. Valentine and Earthstone are classed as one producer for delivery purposes.

**POST CODES** : See page 2 – If not in Areas Local, 1, 2,3 you will need to add a surcharge:  
Area 4 add £10, for Area 5 + 6 add £30, Area 7 add £40, Area 8+ Please Ask For Special Quote

All deliveries of palletised clays and slips can be arranged on a tail-lift vehicle - however the pallet will only be lowered off the vehicle, any other help by the driver is not guaranteed.

Problems with deliveries to houses are kerbs, slopes etc and so in those situations the pallet can only be dropped on to the road and any further action is the customers responsibility.

**This is a very cost effective way for purchasing clay but you must be aware that the driver will not usually carry the clay or help to move the pallet more than a few feet and then only if on a totally flat surface.**

## EARTHENWARE METALLIC GLAZES

Brush On Code	Spectrum Metallic Brush On Cone 05 1040-1050oC	473 ml Pot	Brush On Glaze	Spectrum Metallic Brush On Cone 05 1040-1050oC	473 ml Pot

SPM 152B	Moonlight	£14.65	SPM 155B	Brushed Bronze	£14.65
SPM 153B	Green Mirror	£14.65	SPM 156B	Green Patina	£14.65

These are in US Pint pots

Code	Earthenware Metallic Glaze Powder 1020-1080oC	500 gm pack	1 kg	2 kg	5 kg
LSM10	Metallic Antique Silver	£5.70	£9.50	£18.00	£42.90
LSM22	Metallic Gold	£5.70	£9.50	£18.00	£42.90

Fired at Cone 05, these Metallic Glazes are non-toxic but are not classed as food safe - so are for decorative work only. The thicker the coats - the more mirror like the finish - but the lower the colour definition. The colour can change depending upon the type of light - natural, fluorescent, incandescent.

## CONTEM RAKU, E/WARE CRACKLE GLAZE POWDER

Code	Contem Earthenware / Raku Crackle Glaze Powder 850-1050oC	500 gm pack	1 kg	2 kg	5 kg	10 kg
RAK1	Transparent Raku Crackle	£5.75	£10.50	£18.90	£44.60	£84.00
RAK2	White Raku Crackle	£6.55	£12.05	£22.05	£52.35	£99.40
RAK3	Turquoise Raku Crackle reduced copper effect under reduction	£5.65	£10.20	£18.35	£43.25	£81.40
RAK4	Yellow Raku Crackle	£6.55	£12.05	£21.90	£52.20	£99.30
RAK5	Green Raku Crackle	£6.00	£10.95	£19.80	£46.95	£88.50
RAK6	Red Raku Crackle	£6.40	£11.80	£21.50	£51.15	£96.80
RAK7	Blue Raku Crackle	£9.05	£17.15	£32.30	£78.25	£151.40

In an electric kiln the Contem Raku Glazes give a beautiful crackle glaze, but only a smokey effect with Raku

Some potters when not rakuing soak the finished work in tea or ink to colour the cracks and create effects. We do recommend adding up to 2% bentonite in any earthenware dipping glazes to prevent settling out if keeping the liquid for some time. Although we haven't tried rakuing with all the glaze stains you could probably be able to add then to the transparent raku glaze. Or even the white stoneware crackle glazes to make a pastel colour. **Put on crackle glazes thick to give enough depth of glaze to crack. Some people open the kiln early to encourage the cracks—can take at least 48 hours to crack after taking out of the kiln. Some people put them in the freezer - not our recommendation!**

We recommend sieving the powder before mixing to break it up, adding back any speckles; we recommend using a powered hand mixer (drill with paddle mixer or hand held blender for smaller lots) then sieve to ensure no agglomerated dry powder and then rest it for two hours to allow any air to be absorbed and not create bubbles, pin holes when fired. Mix to double cream or slightly thinner to match the porosity of the bisque. **To help keep in suspension add 2% bentonite to the dry powder first.**

Apply the Lustres in one coat to glazed surface. Gold can take two coats. LU4,5 & 6 can be applied direct for a matt finish. Do not shake the bottle or decant more than you need for the next 20 minutes. Keep brushes separate and dust free, clean with thinners. Dip the brush into the liquid, work on a flat part of the glazed ceramic piece until saturated - then pass the brush lightly over the surface to remove excess liquid metal.

ON GLAZES Used to decorate already glazed and fired surfaces, then fired with the On Glazes at a lower temperature. Carrying media used for On Glazes are usually oils and varnishes. They do have poor resistance to abrasion and chemical attack and so are unsuitable for functional ware. They are opaque and are detectably raised from the surface of the initial glaze.

## STAFFORDSHIRE STONEWARE GLAZES 1200-1260oC In Powder and Large Brush On Pots

- Our extremely popular Staffordshire Stoneware Glazes.
- Possibly the most cost-effective stoneware glaze powders available.
- Very easy to mix and prepare (though for dipping glazes we definitely recommend adding 2% bentonite to all powder and soaking for an hour before adding the final water and mixing).
- They can give good contrasting results when given three brush on coats as against two coats (or two dips compared with one dip) - see the pictures on the website.
- Only available in the two larger brush on pot sizes as they are so cheap.
- Seriously worth trying a selection of these glazes.

### Dipping Glazes:-

We recommend sieving the powder before mixing to break it up, adding back any speckles; we recommend using a powered hand mixer (drill with paddle mixer or hand held blender for smaller lots) then sieve to ensure no agglomerated dry powder and then rest it for two hours to allow any air to be absorbed and not create bubbles, pin holes when fired.

Mix to stoneware to double cream or slightly thinner to match the porosity of the bisque. Mix earthenware to single cream.

If problems keeping in suspension add 2% bentonite to the dry powder first next time.

If you have already mixed a large quantity of a glaze and it is falling out of suspension then you can use calcium chloride flakes as a flocculent, particularly in E/ware glazes, Dissolve one flake in a small amount of hot water and then add to slop one drop at a time

See page 24 for detail on dipping glazes—we do recommend adding up to 2% Bentonite to glaze powders before mixing a dipping glaze to help keep it suspended—it is cheap so you might as well. If making a brush on we recommend using Universal General Medium instead of water to help make it more brushable.

Stains are made by melting oxides, milling to a fine powder so that they are in a safe non-toxic form to use—subject to safe handling practices. For a **White Stain** for use in a glaze use 6-9% Zirc 5 or Tin Oxide from Page 5. Be aware that Tin whites can go pink if a chrome green glaze is being fired in the kiln. 1/3% Lithium Carbonate can help stains melt in more evenly as they are dense.

**STAINS – UNDERGLAZES**

If trying to make a Powder Underglaze a typical recipe is 52% stain, 22% glaze, 22% quartz 600, 4% FS200 Flux. Or for strong stains typically 25% stain, 22% glaze, 49% quartz 600, 4% FS200 Flux. Then mixed with UGM and water at an equal weight to make a liquid. This is a rough guide only, you must test them yourselves.

OMB 01-10, 01-08, 014-017

Box of 50 £9.20 box

Bag of 10 £3.30 pack

The Orton Cones bend at different temperatures depending upon the heating rate per hour in the last hour of firing.

For example: 05 cone bends at

1030oC at 60oC/hr

1038oC at 100oC/hr

1046oC at 150oC/hr

1062oC at 300oC/hr

But will also bend if soaked at

1000oC for over an hour.

It takes 15-25 minutes for a cone to bend—slowly at first but quickly once bent past halfway.

1/2 hour of soaking may be sufficient to bend a cone of a higher grade / temperature.

**VAT to be added to all prices apart from books, and delivery where appropriate**

**SHELVES AND BATTS OVER 21" ARE COLLECT OR PALLET DELIVERY ONLY !**

If you need another size please give us loads of notice (at least 10 weeks) and we will try to get it for you.

Though please ask as we may have just the size you are looking for in our odds and ends piles or can cut one to fit if square or rectangular
