Subcon? DNAsme is Tailored to You

DNAsme is a business management system developed for subcontract manufacturing companies. Our focus is to enable smaller businesses to minimise manual input, maximise value added output and return on investment.

Every business has a unique DNA and a one size fits all approach doesn't work. So DNAsme has been developed to meet individual business processes, documentation and requirements of subcontract manufacturing companies whilst ensuring best practice processes are embedded.

DNAsme enables organisations to optimise the planning and management of their company's commercial and production processes whilst conforming to ISO9001 / NADCAP & customer quality approval documentation requirements.
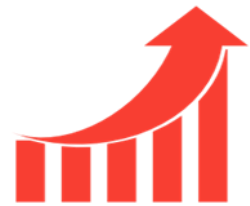

Streamline Operations
Simplify and automate complex business processes

Continuously Improve
Capture, analyse and action improvement opportunities

Grow Your Order Book
Differentiate from competition through transparency

"DNAsme has enabled us to analyse 'real-time' statistics of projects on the shop floor, giving valuable information which should lead to increased throughput and profitability.

Mark Marriner—Lyndhurst Precision Engineering

Everything You Need

SALES ORDER PROCESSING

Contract review, order acknowledgement, scheduling

SALES ENGINEERING

RFQ processing, estimating quotation generation

PURCHASE ORDER PROCESS

Purchase requisition list, create & manage purchase orders

DELIVERY MANAGEMENT
