SIMPLE NETWORK TECHNOLOGIES IS ONE OF THE LARGEST DISTRIBUTORS OF CABLES FOR CISCO HARDWARE, THE CABLES WE SUPPLY USE COMPONENTS MANUFACTURED BY VENDORS APPROVED BY CISCO, YOU WILL ALSO FIND THAT BUYING CISCO COMPATIBLE CABLES FROM SIMPLE NETWORK TECHNOLOGIES WILL BE MUCH CHEAPER THAN BUYING FROM YOUR CISCO HARDWARE SUPPLIER. AS WELL AS VAST STOCKS WE ALSO HAVE A CUSTOM BUILD FACILITY MEANING THAT WE CAN MANUFACTURE THESE CABLES TO YOUR BESPOKE LENGTH AND SPECIFICATIONS.

## Connectivity Products for Cisco VG224 & VG248:

Many of Cisco's customers who buy the Voice Gateway range of products are left confused as to the best way to provide connectivity to their analogue devices. The Cisco VG224 and VG248 present a high density interface using an RJ21 connection. This RJ21 connection can provide connectivity for up to 24 analogue devices. These analogue devices normally present an RJ45 interface in order to connect to the Voice Gateway. This leaves the installer with the problem of how to connect the single RJ21 connector to up to 12 or 24 RJ45 connectors.

## The Basics

The RJ21 is a 50 pin D shaped Centronics style connector, similar to the connector used for parallel printers. It is usually terminated onto 25 pair voice or data cable.

Simple Network Technologies cc offers a number of products that allow the installer to choose the method of connectivity that suits their project best.

### WHEN TO USE THIS OPTION...

When the patch panel needs to be fitted in the same rack, or one close by to the Voice Gateway and the 25 pair cable doesn't need to be run through any enclosed areas such as conduit or trunking.

## Lead Patch Panels

This is when 1 or 2 lengths of 25 pair cable are directly punched down onto the back of a regular 19" 24 port CAT5e patch panel, RJ21 connectors are fitted to the ends of each length of 25 pair cable. All you need to do is fit the panel in the rack, plug the RJ21 connections into your Voice gateway and your connectivity is provided. The analogue devices can now be connected to the patch panel with regular CAT5e patch cords.

leaded patch panel 1 x RJ21 to 24 x RJ45 1mtr  
leaded patch panel 1 x RJ21 to 24 x RJ45 2mtr  
leaded patch panel 1 x RJ21 to 24 x RJ45 3mtr  
leaded patch panel 1 x RJ21 to 24 x RJ45 5mtr  
leaded patch panel 1 x RJ21 to 24 x RJ45 10mtr

***PATCH-PANEL-VOICE-RJ21-3M***  
***PATCH-PANEL-VOICE-RJ21-5M***  
***PATCH-PANEL-VOICE-RJ21-10M***

## RJ21 to RJ21 Cables

Similar to option 1, however the patch panel has 2 RJ21 sockets on the rear of the panel and 24 RJ45 connections on the front. The patch panel is used with 25 pair cables with RJ21 connectors on both ends; one is plugged into the back of the patch panel and the other into the interface on the Voice Gateway. As 25 pair cable is rather inflexible and difficult to manage Simple Network Technologies supplies RJ21 connections with straight connection, 90 degree connection, and 120 degree connection, with the choice of the cable entering the connector from either the left or the right.

### WHEN TO USE THIS OPTION...

This option is very flexible and suits almost all installations, the cable can be run through trunking with the termination to the patch panel being done in the rack. A Telco Patch Panel is usually required for this option.

## Telco Leads

# Hydra Cables RJ21 – RJ45

This is a cable assembly where 12 legs of CAT5e cable all run into the back of an RJ21 connector, the end of each leg of CAT5e cable is terminated with an RJ45 connector.

## WHEN TO USE THIS OPTION...

This is the best option for when you need to connect the Voice Gateway directly to ethernet switch which is located in the same, or a near by rack. All you have to do is connect the RJ21 connector to the Voice Gateway and the RJ45 connectors to the respective ethernet ports on the switch.

## Copper Cable Connection Guide

Standard UK telephone connection, usually white in colour and available with either 4 or 6 pins

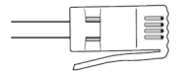

These are used in a number of different instances in networking connections: in a LAN environment they are used for 10BaseT: they also have a number of different uses in WAN connections and voice connections

This is used for CAT5, CAT5e and CAT6 network connections. It has 8 pins and uses a latch mechanism to securely lock into the RJ45 ports found on patch panels, network hardware and datapoints

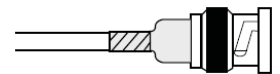

This is normally found on telephones in the USA and is also found on modems and used for ADSL connections. They are available with either 4 or 6 pins and are terminated onto the cable with crimping

The Siemon S110 connector is EIA/TIA CAT5e compliant and is used in the same applications as an RJ45 connector. The S110 separates the wire pairs to achieve lower levels of cross talk than is found with RJ45 connectors

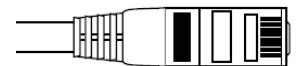

The RJ21 is used with 25 pair CAT5 data cable and either 25 pair CAT3 or CW1308 type voice cable. It's most common use is for connectivity of Cisco voice gateway products

Copper patch leads aren't the most exciting part of any network but never the less they perform an equally vital function as the hardware. Moreover an intelligent and coordinated patching scheme can make the installation and management of any network a far easier job, this is why Simple Network Technologies stock copper patch leads in grey, red, green, blue, yellow, black, white, violet & pink. All of these colours are available in CAT5e & CAT6 cable. Cross over leads are available in grey, red & green. Patch leads can be manufactured to your exact specifications.

# Power Cords

Often over looked, however one of these is required with every bit of hardware you ship to your customers. There are many different power cords to suit the different power requirements of the many different types of hardware.

Whether you require power cords to ship to local customers or for a global roll out in many different countries , Simple Network Technologies can help.

# Patch Panels

Simple Network Technologies can offer Category 5e and 6 patch panels that are available in a choice of port density. We also offer RJ45–RJ45 through coupler panels which have a standard RJ45 connector to both the front and rear of the panel in again both Categories 5e and 6. If you need details about Patch Panels or technical information about products in our Patch Panels range.
