

TRACK MOUNTED SCREENING PLANT – TMS 280

The TMS 280 represents the greatest innovation in mobile screening technology with providing larger screening areas. It is a versatile screening unit that offers the operator the capacity and ability of producing high profit graded materials at a relatively low cost it is the ultimate mobile screening equipment designed for the very serious contractors and quarry operators.

TMS 280 is track mounted making it mobile so that it can move itself easily to the raw material rather than the expensive movement of the material to the screen & with its massive throughput, mobility and a larger screening area the TMS 280 results in the highest profit generation.

Engineered for quick installation and ease of relocation along with its heavy duty steel fabricated Structure TMS 280 becomes a versatile machine capable of dry screening & separating a wide variety of material in the most difficult and demanding of application especially iron ore, recycling, aggregates, compost, topsoil, coal, river gravels and demolition waste.

The TMS 280 is perfect equipment for the quarry or recycling operation where durability, production and mobility are compulsory.
