Supernova Event Package

This package takes all the fun and excitement of the party packages to a larger scale with 30 to 90 minute programs for audience of 21 or more. Pricing: \$185 to \$285

Party/Event Hosting

Not only can we bring outer space right into your home or backyard, but we can also host party and event programs at the *Noteable Kids Center* in the Denver Tech Center.

Cosmic Add-ons

- Stratosphere Rocket Launch
- Apollo Astronaut Entrance
- Laser Stars Ceiling Projection

Educational Programs

As Colorado's premier space science edutainer, we make learning fun and meaningful with programs that not only improve science proficiency and empower critical thinking skills but also **Bring in the Wow!!**

Our trademark "**Focus on Fun**" methodology lets kids go hands-on with countless space science gadgets, gizmos and projects that add a layer of fun and excitement to our programs unmatched in the world of science enrichment.

Enrichment Programs

Space Adventure Enrichment Programs are activity-based, space science-themed before & after school programs that get kids energized and excited about science and learning through unique space science exploration activities.

Workshops

SpaceTime workshops are single setting space adventures that utilize our "Five-Es" inquiry based learning strategy to give kids a hands-on, minds-on outer space experience. They range from 30 to 90 minutes in length and are great for almost any classroom type environment.

Assemblies

SpaceTime assembly programs are designed for larger audiences and are presented as high energy "space shows" that include space science props and special effects, with the children participating in the activities on a volunteer basis. These shows make great "edutainment" for back-to-school nights, science fairs, scouting events and most other large audience events.

Workshops and assemblies can also take place at the *Noteable Kids Center*.

Day Camps

SpaceTime Space Adventure Camps are week-long half day and full day journeys deep into the mysteries of outer space and the science

of exploring it. Though their main emphasis is on fun and interactivity, each camp includes subtle critical thinking exercises that encourage kids to challenge their understanding of the world

and the space that it inhabits. These camps take place at various locations in and around Denver throughout the summer and during school breaks in the spring and fall.

Space Adventure Camp themes include:

- Alien Invasion
- Solar System Explorers
- Astronaut Training
- Rocket Blast
- Space Explorers
- Interstellar Adventures

Call us or visit our website for up-to-date day camp locations, dates and themes.
