This is the new consolidated list of what needs to be done by Nov. 1st.

1. Facebook and Twitter Signup
- there seems to be a problem with importing usernames that have periods in them. I know we already have our system designed to drop . and - from the usernames in the url, but for some reason, they don't drop when they get imported from Facebook or Twitter. Subsequently, our member urls are not connecting properly.

2. Exhibit Preview
- the preview works fine, though there are a few things needing to be done.
- most importantly, the video preview needs to be recreated every time a change is made. Currently, the video preview is not updating when changes are made.
- the embed video < > in the top left is still there.
- set the video to auto-play
- add video playback options for pausing/playing

3. Missing Affiliate Items
- create a new Admin tab, instead of combining it with the Members tab.
- add referral notifications for referrer and admin, add to Messages as well
- add a new column called "Last Referral" before Pay Now, then sort the table by this column. This was already crossed off in the previous list, but the column is not there.
- replace the primary email address with the new Paypal email address. This column should be almost empty, since no one has their Paypal addresses entered yet.

4. Promo Code
- plus50, plus100, pro50, and pro100, these are for one-time use per person for their first year only. These standard code, do not qualify for affiliate commissions. Please keep track of who signs up, when they sign up, and which codes they use. We may want to display this later on.

5. Payment / Activation /
- from the Features page, set tags for which Pay Now button is pressed; Plus or Pro.
- on Sign up page, set tag for Promo Code entered.
- set the promo code needs to optional. It is currently required for beta
- add dynamic content to activation email, indicating which type of account they're signing up for
- plus an extra thanks to them for signing up to a paid account
- if paid account, then display how much the price is for membership type
- if promo code, then display what the new price will be after the discount from promo code
- from activation link, redirect to Paypal
- after payment, redirect to first Startup page

6. Theme Pages changes
- new checkbox for image readiness is not working. It is not saving…
- Save and Close when in Image Details does not work. It should remember where the Edit was clicked from either Upload > Image Library or Images pages

7. Admin fixes
- the Members table should sort by last login, currently it is sorting by Sign up date
- the Exhibit table should sort by date created
- the sub menu for filtering exhibits is missing, please add a new Queue tab instead for all exhibits that are in the processing queue. This was already set up as a submenu, but the menu is no longer there?

8. Minor FF and Chrome bug
- the Log In button from my Posts page doesn't work. The button itself is OK, though when I enter my u/p, the ajax loading gif just keeps on spinning. If I change pages to anywhere else, it logs in with no problem. This appears to be isolated to just FF and Chrome on the Mac, so please check them out on the PC. While you're on the Log In popup, can we add a "Remember Me" checkbox option?

9. REMOVE PAYPAL SANDBOX
- from Features and Membership settings pages

10. GetResponse
- incorporate the 3 new custom account fields, so that we can use this as our newsletter system at the start
- user_type, user_subtypes, and membership_type

BEFORE FIDELIS PROJECT

We need to establish a better communications method to replace GetResponse. Karen has difficulties using their template system, plus it's money we just don't need to spend if we don't have to.

11. Custom Promo Code HOLD
- create a new Admin tab that allows Karen and I to add custom promo code. This way we can create a promo code that is for a specific person. These are one-time uses per person and then they are removed after using it. This was already crossed off in the previous list, but the section is not there.

12. Admin Newsletter HOLD
- create a new Admin tab that allows Karen and I to send announcements to registered members. These announcements should be sent to Email and/or Messages, based on their individual member settings.
- please provide the ability to send announcements to ALL or select User types, User Subtypes, or Membership types. For example, if we wanted to send a targeted announcement to only Amateur Photographers that have Free accounts OR all Painters no matter what user or membership type OR all Plus account members, etc…
- add WYSIWYG edit to create new newsletter with Preview before sending option. This could be a popup to a link, like you've done in the past for the email templates.
