# ULTRASONIC PESTREPELLER®

PESTREPELLER is effective in controlling mice, rats, roaches, fleas, flies, crickets, silverfish, water bugs, moths, ants, and most other common pests. Laboratory research has shown ultrasonic sound waves attack the auditory and nervous systems of most common pests causing them pain and discomfort. With 130 decibels of sound pressure, pest will give up their source of food, water and shelter and move on. These high-intensity sound waves are out of the range of hearing of humans and most household pets such as dogs, cats, fish and birds, and farm animals.

**PESTREPELLER** will not interfere with televisions, radios, electronic burglar alarms, fire or smoke detectors, pacemakers, hearing aids of other electronic equipment.

PESTREPELLER does not harm plants neither.

### **CHARACTER:**

It effectively protects and area measuring 2,000 to 2,500 unobstructed square feet. After plugging PESTREPELLER in, you will notice a small red L.E.D. indicates PESTREPELLER is operating properly. PESTREPELLER'S unique test button on the back panel, when depressed, causes the unit to shift its output down into the audible range of humans for a reassuring check of its ultrasonic output. The shrill, siren-like sound produced simulates the sound pests hear continually.

PESTREPELLER automatically sweeps the ultrasonic range of 30,000Hz to 65,000Hz, the adjustment knob allows the rate of this sweep to be varied to prevent pests from developing an immunity to a preselected single sweep rate.

# **USAGE:**

When you first install PESTREPELLER turn the knob fully to the left or to the right. Each month later, twist the knob just a bit in the opposite direction. Depressing the test button before and after the adjustment lest you hear the slight difference in the sweep rate. You will begin to notice the effects of PESTREPELLER in a few days. There will be an absence of rodent activity. Perhaps you will notice and increase in insect activity during this time due to the ultrasonic sound waves driving these pests from hiding. In a short while they'll be gone also.

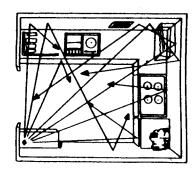

While the pests are being driven away, they are undoubtedly leaving their eggs and larvae behind which are not affected by the ultrasonic sound waves. Incubation will continue and they'll hatch as usual. At this point, however, PESTREPELLER ultrasonic output will begin to attack these hatchling's auditory and nervous systems, driving this new generation away. In 4 to 6 weeks the infestation should be over and you'll be free of pests. Leave PESTREPELLER plugged in for year round, day and night pest control. It costs only about 1 1/2  $\not$  a day to operate. No more dangerous chemicals to buy, no more messy traps to be clean.

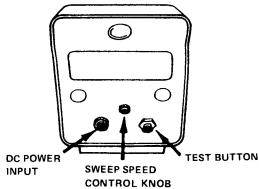

## NOTICE:

Do not place PESTREPELLER on carpeted surfaces, behind furniture, draperies or other soft objects as they will absorb the sound waves.

Do not place PESTREPELLER next to your ear before performing this check.

Do not use outdoors or let the unit come in contact with ware.

# **SPECIFICATIONS:**

Dimensions : 4" X 3 3/4" X 3 1/2"

Weight : 1 pound

Power supply : 105-120 volts AC, 60 cycles

: 200-240 volts AC, 50 cycles

Power consumption: 1 1/2 watts

Frequency range : 30,000Hz to 65,000Hz

(continuously variable)

Output sound pressure: 130dB

AC ADAPTOR UL LISTED FEDERAL E.P.A. REGISTERED
