

IPL Hair Removal

Intense Pulsed Light is a method of permanent hair reduction using a focused broad spectrum light.

The light is applied to the skin using a handheld device which then sends a shot of light and heat down into the hair bulb. This particular area is where the highest concentration of melanin is contained. The intense heat which has now been converted to heat energy, will help kill the hair bulb, hair shaft and the entire hair follicle, permanently.

During your treatment process, clients can expect a 90% reduction of hair in the specifically treated area.

All our IPL treatments starts with a full consultation and a patch test. All our therapists are fully qualified and are licensed to treat clients using advanced IPL equipment. Discover our award winning professional IPL treatment now.
