

Night Vision CCTV Camera – Infrared CCTV Camera Installation 2018

## Night Vision CCTV Camera

With over 40m infrared, LED we will light up the darkest area

At Night Vision CCTV Camera we know that if you want to protect your home from bad guys after dark you should consider a security camera with the right night vision capabilities. Most modern security cameras have some form of night vision, but understanding what makes a good night vision security camera can help you avoid the grainy, green footage we see all over YouTube. With a combination of infrared sensors, image quality, and a wide field of view, a good night vision security camera can capture criminal activity in the darkness with almost the same clarity as its daytime equivalent.

Night Vision CCTV Camera can help with adding outdoor surveillance to your home security solution can be a practical and economical way to protect and secure your home. However, there are many options for consumers to sift through and not every home has the same outdoor surveillance needs.

We've put together this comprehensive guide to help you identify your home surveillance Night Vision CCTV Camera needs and choose the best outdoor surveillance cameras for your home.

### **Does the Night Vision camera have high-quality video resolution?**

Another factor to consider when Night Vision CCTV Camera Systems surveillance shopping is the camera's resolution. The higher the camera resolution, the clearer and easier the images will be to see. Ideally, you'll want 1080p or higher resolution for the clearest images.

Keep in mind that if you connect your camera to a DVR or other recording device, Night Vision CCTV Camera Systems will also need to be HD compatible in order to keep the image at a high quality.

### **Does the security camera have night vision?**

CCTV Monitoring at night is one of the most common uses for outdoor surveillance cameras, and in order to get a high-quality image, you'll want to purchase a camera with infrared (IR) technology. Many models have a built-in IR cut-switch that automatically enables and disables the infrared technology depending on the lighting conditions. The number of infrared LEDs used in a camera will help determine how far of a night vision range a camera has.

### **What's the best Night Vision camera style for your needs?**

There are two main styles of outdoor security cameras – dome or bullet. Both Night Vision CCTV Camera Systems styles are fairly obvious to potential intruders, however, it is more difficult to determine which direction a dome-style camera is pointing, which may help deter a potential intruder. Another thing to keep in mind regarding camera style is whether you want to mount it on the ceiling or wall.

### **Does the night vision camera have sufficient recording capacity?**

If you want to watch a playback of the goings-on around your home, you'll need a camera with onboard storage capacity or cloud recording capabilities. Most cameras with recording capabilities have an onboard SD or microSD slot that allows for sufficient recording space.

Some systems also record to DVD or mini-disc, but most are now transitioning to DVR (digital video recorder) technology. A computer-based camera system records your video to the PC's hard disc, making it fast and easy to review your video history.

### **Do you want to access your camera with a mobile device?**

Many Night Vision CCTV Camera Systems available today are able to live stream a feed directly to your mobile device. If you want to be able to check in during the day or while away for extended periods, this is a valuable feature to have. Be sure to choose a camera that is compatible with your device. Generally, remote access, mobile alerts or cloud-based features require monthly or yearly fees with your home security monitoring provider.

### **Do you want a wired or wireless security camera?**

Wireless Night Vision CCTV Camera Systems are easy to install and reposition, but you'll want to check the battery levels periodically to ensure you're fully protected. Wired units usually require professional installation and access to a power outlet, but tend to provide clearer images than their wireless counterparts.

### **Does the night vision camera have pan/tilt/zoom features?**

Cameras with remote controlled pan, tilt, and zoom are ideal for providing coverage to larger areas and allow the user to get the best

viewing angle possible without having to physically reposition the camera.

### **Do you want a camera with energy saving features?**

Night Vision CCTV Camera Systems can eat up a lot of energy, but if you find a model that only records when motion is detected, it can help to cut down on operating costs. Many models will even send you push or email notifications when something out of the ordinary is detected, so you don't need to be continually monitoring yourself.

### **How much do you want to spend on Night Vision Cameras?**

You can get a Night Vision CCTV Camera Systems for as little as £199, but this is probably a case of "you get what you pay for." A good-quality, basic system (one camera) typically costs between £200-400 and can climb to thousands of dollars for multi-camera, indoor/outdoor, fancy systems with every feature imaginable.

CCTV Night Vision Camera installers did the research and spoke to professionals in the security industry to help bring you everything you need to know to choose the best security cameras for your business. Below, we cover security cameras and security camera systems that you (or a contractor) can install yourself. They do not include having an alarm system or a security firm monitoring the feeds. If your business has complex security needs, we recommend a full security system.

You'll almost certainly have cameras pointed at your cash registers. For an added layer of security, make sure you're using a POS that has an integrated inventory management system. At CCTV Night Vision Camera services we would recommend Lightspeed for their excellent theft-prevention tools such as live-tracking stock amounts and pictures that make it clear what item is attached to which barcode.

### **Areas we install Night Vision CCTV Camera Systems**

Birmingham, Bath, Blackburn, Bradford, Bolton, Chester, Coventry, Crewe, Derby, Blackpool, Huddersfield, Harrogate, Hull, Halifax, Liverpool, Lancaster, Leicester, Lincoln, Leeds, Manchester, Milton Keynes, Motherwell, Newcastle upon Tyne, Nottingham, Northampton, Oldham, Peterborough, Preston, Sheffield, Stockport, Slough, Sutton, Sunderland, Southend-on-Sea, Stoke-on-Trent, Cleveland, Teesside, Warrington, Wakefield, Wigan, York.
