" Thank you for purchasing our plugin. please feel free to email via our user page contact form here. Thanks so much! "

Introduction

As the name suggests, this plugin gives power to the merchant by allowing them to sell products based on a user's GEO location which makes it unique for a merchant who sells globally. In such cases, a merchant can control whether or not they want to sell specific products to a specific country. The Country Specific Products extension is a perfect solution if you want to publish your products to specific countries.

Country Specific Products extension is easy to install & configure right from the backend. We code hard to confirm our extension works with 3rd party extension without suffering from the performance issues. Updating countries in groups will take immediate effect on the frontend. You can create a country group by selecting countries from different continents and allow a customer to visit your website to purchase specific products. Whether or not the customer is logged in or is a guest user, our extension automatically detects the current GEO location of the customer by their IP address and shows products based on the country group.
 Here is few highlighted features:

- Backend configuration to create/manage multiple groups
- Auto recognition of users IP-based geo locations
- Show products based on a country group
- Quickly select countries using check boxes
- Support multiple stores
- Easy installation & activation right from backend
